

Checklist- Prior to Flea Treatment

- ✓ House must be left vacant for minimum 4 hours, you cannot be home during treatment
- ✓ NO exposed food on bench tops, in fruit bowl ect (within cupboards/ fridge ect is fine)
- ✓ Fish tanks must be covered completely. The chemical used is toxic to marine life.
- ✓ Take washing off the line as our technician will spray the clothes line
- ✓ Children's toys need to be put away, especially those of younger children that may go into small mouths
- ✓ Please vacuum all carpet and couches thoroughly prior to service
- ✓ Pets are tied up away from house and treated with fleas on the day of the service, water bowls emptied and turned upside down
- ✓ All windows and doors are to be closed and remain this way for 2-3 hours
- ✓ Do not clean windows prior to service as there may some residual chemical left after the spray, maybe cleaned after 1 week
- ✓ Remove all bed linen and wash on the hottest washing machine setting
- ✓ Take apart couch and have cushions lined up along wall
- ✓ Ensure there is nothing on the carpet all toys, clothes ect must be put away.
- ✓ If possible remove mattress from room (our technician can help with this)

Checklist- Post Flea Treatment

- ✓ As above the room and home must be left vacant for 4 hours
- ✓ Please vacuum all carpet and couches thoroughly post service
- ✓ Please leave the bedding outside for 8 hours post treatment, preferably in the sun
- ✓ YOU WILL SEE PESTS post service, it is possible that you will see more pests than before. This is normal and is an indication of an effective treatment.
- ✓ You may find minimal residue on windows- although we try avoid this sometimes it is unavoidable. Windows maybe cleaned 1 week after the treatment.
- ✓ Your second treatment will need to be performed after 10-14 days from the original; this is essential to breaking the breeding cycle. If in a very humid environment or summer we recommend the second treatment earlier.
